

KING AIR NATION

March 27th, 2024

To: Cuba Municipal Airport
Attn: Tourism Committee for the City of Cuba MO
RE: King Air C-12 Static Display Aircraft

It has come to our attention that the city has an aircraft for aesthetic display at the Cuba Municipal Airport. We applaud the efforts to display such an iconic aircraft but our opinion could be considered biased, as our name sake might reveal. The King Air is truly the pinnacle of general aviation with none to remotely rival its longevity, performance, economy, or diversity.

In an effort to support the undertaking of displaying this aircraft appropriately, we think we have found a mutually beneficial opportunity. We believe there is some commercial value remaining in key parts (mainly the landing gear) that remain installed on the aircraft. In the past we have assisted similar aircraft projects like yours by providing aesthetically similar components in replacement for the potentially viable parts removed from the aircraft. We offer a turn key solution with experienced and appropriately equipped staff.

Proposal:

We would like to offer the Committee a payment of \$10,000 to support the tourism efforts of the city in trade for the removal of the landing gear and any internal components that can be removed without affecting the external aesthetics of the aircraft. We will replace the landing gear with aesthetically similar components and insure the aircraft will be able to be safely displayed with the gear in the down and locked position. Upon acceptance of our proposal in writing, we would make a 50% non-refundable deposit, and the balance when we arrive on site to complete the work. Depending on our crew schedule, we should be able to accomplish the job within 90 days of acceptance.

Feel free to reach me directly with any questions.

Respectfully submitted,

Carl Davis
